

# Wet Season 10% Phosphorus

**Nutri-Lick**  
Livestock Feed Supplements

## Feeding Guide

Wet Season 10% P is a low intake, calcium/phosphorus/sulphur based wet season supplement suitable for correcting mineral deficiencies of breeder cattle and sheep in phosphorus deficient country. This mix should be fed when breeders are gaining weight on good quality feed to replace skeletal reserves of calcium and phosphorus and to increase fertility and milk production. Wet Season 10% P can also be fed to growing cattle/sheep to increase weight gain on summer feed at low intake. Daily intake 70-150 grams per day for breeders/heifers and 50-70 grams per day for growing cattle. Daily intake 10-20 grams per day for sheep.

Wet Season 10% Phosphorus	
Dry Matter	98.6%
Total Crude Protein	8.3%
Crude Protein	3.3%
